

Functional Independence Measures (FIMS)

The goal of rehabilitation is to improve the patient's functional ability to resume control over activities of daily living and independence. The chart below reflects 2010 First Quarter FIM score changes from admission to discharge (the higher the number, the better).

Discharge Disposition	Jewish Home	Similar Facilities	Nation
% of patients who go home	87%	72%	74%
% to Long Term Care	3%	16%	15%
% to Other/Acute Hospital	10%	11%	10%
